

Photo 13. Huerto Andesite (Thu). Two flows, capping the northeast rim of Mount Lion (LM), have yielded $^{40}\text{Ar}/^{39}\text{Ar}$ ages of 27-96-27.64 from groundmass separates (geochron sample no. 03L-44, table 3). Along Houselog Creek in foreground, the flows are underlain by Fish Canyon Tuff (Tfc), debris-flow deposits of Buffalo Pass Campground (Tdb), and Saguache Creek Tuff (Tsc)
